Hello LAS432,

The relationship between leadership and climate change should define a common purpose. This purpose could take all forms of political and advocacy processes. The overall goal is to define the urgency of the climate issues to be resolved by the community it impacts. You always hear the term, "not in my neighborhood". Why does this not apply to climate change? The answers lie in the messaging that confirms the encroaching problem is relatable to the leadership involved. Moreover, frame the message in relatable fortitude to resolve social, economic, and community issues impacted by climate change. Thereby, changing the mindset that the solution is inclusive, and the technology is ever evolving to meet current emotion and political message. One such technology is electrical energy storage until power is needed.

Hello Class,

I am coming from a military background so I strongly believe that by having good leadership, we can change society one person at a time. I say this to say that if we had more leaders in this world with more ethical morals then I strongly believe that more people in the world would do the right thing, especially when nobody is looking. Advancements in technology can simplify this relationship in that now leaders can create courses or videos that they can get out to the public for low cost so that they can reach out to bigger sets of audiences and people. This can help increase awareness of the ethical mindsets and understand what is right from wrong, and how we should be acting and carrying ourselves when nobody is looking. However, with a lack of leadership we see people fall into dark holes that they can't find themselves get out of such as by becoming drug abusers, alcoholics, committing crimes, not carrying about others, and being selfish. These people require more leadership in their life, and without it, they tend to choose less ethically correct decisions.

Monday

Hello Professor and Class,

Part 1:

As part of my job continuing education is required and I thankfully have the opportunity to obtain certifications when I take courses, webinars, quizzes, etc. Furthermore, for my professional career and educational career, I was able to obtain my Certification of Professional Coding (CPC) from AAPC. Furthermore, years ago I had the opportunity to be part of a school project in the community where I live. We were able to assist in remodeling the cafeteria, and paint playground areas and classrooms. This experience was wonderful because just seeing the kids enjoying a better class environment was very satisfactory for my team and me. One thing I may need to collect are some more reference letters, as I have learned these are great documents to add to our portfolio.
