

In the space below please provide a brief explanation of how the position for which you are applying for CPT approval directly relates to your program of study. If needed, please refer to the Graduate Course Catalog on <https://www.ucumberlands.edu/academics/academic-catalog>. Please be sure to write clearly and legibly!

I am working as a computer system analyst, which requires deep knowledge of how information can be handled

within an organization. As a system analyst, I should be able to analyze the information and security aspects of the company. Pursuing a doctoral degree related to information security will help me to achieve better results and professional excellence. Having a master's degree in the same field will help me to understand the concept of information security in a better way. As a system analyst, I would have to collect the information, analyze the data,

and find any vulnerabilities within my company. To understand business needs and consulting on SAP APO functionality i.e. DP (Demand Planning), SNP (Supply Network Planning), PPDS (Production Planning and Detailed Scheduling) and GATP Global Available to Promise) with the ability to understand and convert the functional

specifications to technical specification, and unit test plan. Configure the release management process of quoting, planning and scheduling of planned/production orders changes and deploy them to production environment.

My goal is to research, how to find the vulnerabilities of a company, how to prepare a road map to minimize the loss, how to train the data security teams to proactively to find the solution for the crisis. I would like to do more research on these areas and improve my knowledge in all aspects. This is only possible with the help of extensive research and learning in this field.
