

5-2 Short Paper: Analyzing a Sample Intelligence-Achievement Report

To complete this short paper, you will analyze and consider a diagnosis based off the results of the intelligence and achievement tests. Think about how viewing results from both tests can help a practitioner better understand the test-taker's functioning and provide a more comprehensive recommendation.

Utilize your understanding of intelligence and achievement testing to assign a diagnosis to Bob from the [Sample Intelligence Achievement Report](#).

Write about Bob's strengths and weaknesses as they relate to his intelligence and achievement testing. Consider the following questions:

- Which areas in the Wide Range Achievement Test 4 (WRAT-4) and Wechsler Abbreviated Scale of Intelligence 2 (WASI-2) would be considered strengths for Bob? Which areas would be considered weaknesses?
- Assess Bob's strengths and weaknesses and consider how both impact his overall functioning.
- Based upon his identified areas of limitations, what are some suggestions or recommendations for Bob?

Submit your assignment here. Make sure you've included all the required elements by reviewing the [guidelines and rubric](#).
