

Video Transcript:

CARL: Hi, Mr. Davis. I've got some medication here that will help with the itching. This medication might make you a little sleepy. You might have taken diphenhydramine before. You might know it as Benadryl.

RODNEY: Yes, I've taken Benadryl before. While you were gone, I started coughing. It feels like I'm coming down with a cold, and my nose is kind of stuffy too, and I can't quite catch my breath.

CARL: Do you mind if I listen to your lungs before I give you the medication?

RODNEY: No, go ahead.

CARL: OK, just take a deep breath in for me.

[DEEP BREATHING]

CARL: Again. Again. And again.
