

ASCI 615 - Module 3 Discussion: Safety Research Case Study

Data collection; it's the core of accident investigation. It assists in safety initiatives, research; it's intricate and time consuming.

In Module 3, the discussion is involved with ASIAS database. You will use the tutorial in the module to do a graduate level research question or hypothesis, like the majority FAR 135 fatal crashes between 2000 and 2010 in Alaska are associated with limited visibilities. Then, you will do a list of variables such as "Part 135," "fatal crashes," "Alaska," "probable cause." Then, follow this up with the instructions to download in Excel.

Remember, this data is the foundation of your case study. It will also assist you in Module 4 and using the Crash Lab.
