

ASCI 615 - Module 6 Discussion: Structural and Fire Investigation

Folks, in this discussion you are asked to go find a completed accident investigation report. You can go to the NTSB site, places like Flight Safety Foundation, or other sites from other countries. Seek out and find a report that is clearly related to structural and fire related causes or contributing factors. Compare and contrast relevant information between the two. Identify subsequent findings from any number of sources, as they are presented, and address recommendations from valid and reliable sources from industry and/or regulatory agencies.
