Prior to beginning work on this assignment, review Chapter 22 of the textbook.

Imagine that you have been hired as a quality control data analyst. The company you have been hired for has experienced a decline in their sales numbers. The CEO speculates that there may be some areas for improvement in their quality control practices. You have a strong background in data analytics, but you know little about quality control practices. As a data analyst, you need to determine some key data points that will assist you in identifying any problem areas in the quality control process.

In your paper,

- Identify data that you believe would be useful in assessing for quality control.
