

Post instructions:

Answer these 5 questions in **your own words.**

1. Discuss chronic compensation and what occurs in the body for respiratory acidosis.
2. Define plasma osmolality.
3. Describe aldosterone's role in sodium and potassium balance.
4. Describe how the lungs compensate for acid-base balance disturbances.

5. Describe how the kidneys compensate for acid-base balance disturbances.

* In the post, please write out the question you are answering.

*Write an open question at the end of the post that encourages thinking for others to respond.
