

Many of you have already heard about the "Bio-psycho-social" model or "Bio-psycho-social-spiritual" model. However, for this discussion board writing, attention is given to each "individual" model. What are the main features of the Biological model? Psychological? Social?

After this is explored, continue on with the rest of the assignment. Consider how the "Disease of the Human Spirit" fits or does not fit within the models already discussed. Discuss the addict and spiritual bankruptcy/void of a relationship with God. In what way does your biblical worldview and/or biblical insights impact the way you respond to the previous questions?

Please do not attach your essay to this course's Discussion Board. I want students to be able to easily read the Essays without having to open attachments. When you submit your Essays through the assignment link, though, I want work to be within Microsoft Word documents.
