

Total	52,000	45,000	76,000	28,000	201,000	31%	448,000
% total seen	26%	23%	38%	14%	-	-	-

<sup>a</sup>Estimates are based on non-duplicated person counts, with persons seen assigned to only one category in the following order of priority: state and territory public mental health, private sector mental health services, general practitioner only, and other health services.

<sup>b</sup>'Treated by health services' does not imply treatment is provided at adequate or optimal levels.

<sup>c</sup>Estimates are rounded to the nearest thousand.

<sup>d</sup>Population data are estimated resident population of Queensland, as at June 2004 (Australian Bureau of Statistics, 2005).

<sup>e</sup>Based on ambulatory service utilization data 2004–2005 provided by Queensland Health, adjusted for over-counting due to the lack of a state-wide unique person identifier and to allow for individuals who use only inpatient services (as recommended by Queensland Health). All individuals seen by the public sector are assumed to have severe disorders, however this may not be the case across all areas, particularly where there is a shortage of primary care services to deal with mild and moderate conditions.

<sup>f</sup>Derived from the National Mental Health Report 2007 (Department of Health and Ageing, 2007), with splits by severity based on a profile of private psychiatrist activity (Harris and Boyce, 1996; Solomon et al., 1993).

<sup>g</sup>For the 18+ year population, based on analyses of 1997 National Survey of Mental Health & Wellbeing (NSMHWB) (Andrews et al., 2001b), with adjustments as per the MH-CCP model (New South Wales Department of Health, 2001); for the 0–17 year population, based on the child and adolescent component of the NSMHWB (Sawyer et al., 2000).

<sup>h</sup>Derived from analyses of the 1997 NSMHWB (Andrews et al., 2001a). Other health services include private psychologist, accident and emergency departments, community health services, and non-psychiatric units in general hospitals.
