

APPAREL EVALUATION

GARMENT COMPARISON 1

T-SHIRTS/TANK TOPS

You are to compare and evaluate 4 garments, **1 t-shirt, 1 tank top, 1 camisole, 1 polo shirt.**

Each should have similar properties as well as differing elements.

These garments **must be from different labels** and come from a wide variety ranging from what you consider the highest to the lowest quality. They **must be** the knit fabrics assigned, **NO WOVEN FABRICS.**

Identify the manufacturer.

Does the garment conform to the TFPIA and Care Labeling Acts? Explain.

Be thorough in your examination of each garment from the outward appearances to the inward construction.

Elements of style and design execution should be evaluated. (Neckline, sleeve, silhouette)

Include a "Quick Cost" breakdown with your justification of the cost values.

Also include a picture of the front and back of each garment you evaluated.

Ultimately you will present an educated comparison of the quality, value and durability of these garments. (You might, in the future, have to purchase, justify and merchandise such goods for the company employing you.)

Your report will be given to the class orally, but you must submit a **DETAILED** product report **written in Business Format typed, double-spaced, STAPLED** and checked for grammatical and spelling errors.

Points will be deducted for such errors.

Make sure you bring your garments to class in order to visually reinforce your evaluation.

You will not be able to present in class if you do not have all the assigned garments.
