

Homework 5

Write a summary in essay form of the article “Skin Cancer and photoprotection in people of color: A review and recommendations for physicians and the public” by Agbai and colleagues. Your summary should include answers to the following questions. Include citations (in AMA or APA format) at the end of your write up for the article and other sources you use.

Your submitted document must be typed, double space, 12 point Arial font, 2-3 pages. See rubric on page following for how the essay will be graded.

1. What was the objective of this article?
2. Using the website cancer.org, along with the article, describe the types of cancers reviewed by the article, including what it is, what it looks like, and what the risk factors are:
 - a. Basal cell carcinoma
 - b. Squamous Cell carcinoma
 - c. Malignant melanoma
 - d. Mycosis fungoides
3. What are the main findings described in this article? Highlight at least FIVE points from the article.
4. What evidence from the article seemed most convincing to you and why? Include examples from the text to support your points.
5. What evidence is the least convincing and why? Bring in examples from the text to support your points.
6. Has this study changed your thinking on the topic of skin cancer in people of color?
7. What do you understand better now that you have read this article?
8. Public Health is generally divided into five areas: Epidemiology, Biostatistics, Environmental Health, Health Promotion/Education, and Health Administration and Policy. Considering your own interests in public health, what approach would you take to address the topics covered in this article? Write your approach in 1-2 paragraphs.
 - a. If you're interested in Epidemiology for instance, what type of research or further information would you like to see? If you're in Health Education, what type of intervention do you think would be useful to promote health and prevent skin cancer in a certain population?
