New technologies in aquaculture

Related titles:

Improving farmed fish quality and safety
(ISBN 978-1-84569-299-5)
Fish farming enables greater control of product quality, but there have been concerns about the levels of contaminants found in farmed products. Their sensory and nutritional quality can also not equal that of wild-caught fish. This important collection reviews potential negative safety and quality issues in farmed fish and presents methods to improve product characteristics. The first part of the book discusses contaminants, such as persistent organic pollutants and veterinary drug residues and methods for their reduction and control. The second part addresses important quality issues, such as genetic control of flesh characteristics and the effects of feed on product nutritional and sensory quality.

Improving seafood products for the consumer
(ISBN 978-1-84569-019-9)
Consumer health and well-being may potentially be improved by consumption of health promoting, safe seafood products of high eating quality. This book provides a convenient review of significant findings in key areas of seafood research, with chapters authored by experts in the field. Consumer attitude to seafood products is first discussed, followed by chapters analysing important advances in the area of the health benefits of seafood, for example the relationship between omega-3 fatty acids and heart disease. Subsequent parts of the book discuss key topics in seafood safety, advances in processing technologies and methods to improve the quality of farmed fish.

Shellfish safety and quality
(ISBN 978-1-84569-152-3)
Shellfish are a very popular and nutritious food source worldwide and their consumption has risen dramatically. Because of their unique nature as compared to beef and poultry, shellfish have their own distinct aspects of harvest, processing and handling. Edited by leading authorities in the field, this collection reviews issues of current interest and outlines steps that can be taken by the shellfish industry to improve shellfish safety and eating quality. Opening chapters consider microbial, biotoxin, metal and organic contaminants of shellfish. Techniques to reduce contamination are then discussed, such as mitigation of the effects of harmful algal blooms. Chapters also address approaches to managing disease and other methods to improve quality, such as improved packaging methods and reduction of biofouling.

Contents

Contributor contact details ..... *xix*
Preface ..... *xxix*

Part I Genetic improvement and reproduction 1

1 Genome-based technologies useful for aquaculture research and genetic improvement of aquaculture species 3
Z. Liu, Auburn University, USA
1.1 Introduction 3
1.2 DNA marker technologies 4
1.3 DNA sequencing technologies 18
1.4 Gene discovery technologies 26
1.5 Genome mapping technologies 28
1.6 Genome expression analysis technologies 35
1.7 Acknowledgements 41
1.8 References 41

2 Genetic improvement of finfish 55
G. Hulata, Agricultural Research Organization, Israel, and B. Ron, Israel Oceanographic & Limnological Research Ltd, Israel
2.1 Introduction: current status of aquaculture genetics 55
2.2 Key drivers for genetic improvement of finfish 56
2.3 Case studies – risks associated with selective breeding programs 69

2.4 Future trends ... 71
2.5 Sources of further information and advice ... 72
2.6 Acknowledgement ... 72
2.7 References ... 72

3 Genetic variation and selective breeding in hatchery-propagated molluscan shellfish ... 87
P. Boudry, Ifremer, France
3.1 Introduction ... 87
3.2 Monitoring genetic diversity and risks related to inbreeding ... 88
3.3 Inheritance of traits important for aquaculture ... 90
3.4 Current status of established molluscan shellfish breeding programs ... 92
3.5 Present needs and future trends: use of marker assisted selection and genomics ... 97
3.6 References ... 100

4 Controlling fish reproduction in aquaculture ... 109
C. Mylonas, Hellenic Center for Marine Research, Greece, and Y. Zohar, University of Maryland Biotechnology Institute, USA
4.1 Introduction ... 110
4.2 The fish reproductive cycle and its control ... 110
4.3 Reproductive strategies and dysfunctions in captivity ... 116
4.4 Hormonal therapies for the control of reproduction ... 118
4.5 Induction of oocyte maturation and ovulation ... 122
4.6 Induction of spermiation ... 126
4.7 Spontaneous spawning versus artificial insemination ... 127
4.8 Future trends ... 128
4.9 Sources of further information and advice ... 130
4.10 References ... 130

5 Producing sterile and single-sex populations of fish for aquaculture ... 143
T. Benfey, University of New Brunswick, Canada
5.1 Introduction ... 143
5.2 Sterile populations ... 144
5.3 Single-sex populations ... 154
5.4 Future trends and further reading ... 157
5.5 References ... 159

6 Chromosome set manipulation in shellfish ... 165
X. Guo, Y. Wang, Z. Xu, Rutgers University, USA, and H. Yang, Louisiana State University Agriculture Center, USA
6.1 Introduction ... 165

6.2 Principles and methods of chromosome set manipulation 166
6.3 Triploid shellfish 174
6.4 Tetraploid shellfish 183
6.5 Gynogensis, androgenesis and aneuploids 187
6.6 Summary and perspectives 187
6.7 Acknowledgements 188
6.8 References 188

Part II Health 195

7 Advances in disease diagnosis, vaccine development and other emerging methods to control pathogens in aquaculture 197
A. Adams, University of Stirling, UK
7.1 Introduction 197
7.2 Key drivers to improve disease diagnosis and vaccine development 198
7.3 Limitations of current diagnostic methods 198
7.4 Advances in methods of disease diagnosis (mainly for bacterial diseases) 199
7.5 Advances in vaccine development 203
7.6 Other emerging methods to control pathogens 207
7.7 Future trends 208
7.8 Sources of further information and advice 209
7.9 References 211

8 Controlling parasitic diseases in aquaculture: new developments 215
C. Sommerville, University of Stirling, UK
8.1 Introduction 215
8.2 Effects of parasitic disease in aquaculture 216
8.3 Advances in the understanding of parasite biology and host–parasite interactions 218
8.4 Advances in methods of identifying parasites 220
8.5 Advances in methods of controlling parasites 221
8.6 Future trends 237
8.7 References 237

9 Controlling viral diseases in aquaculture: new developments 244
T. Renault, Ifremer, France
9.1 Introduction 244
9.2 Overview of viral diseases in aquaculture 245
9.3 Limitation of current management techniques 248

9.4 Advances in understanding of immunity of aquacultured species to viral diseases 249
9.5 New methods to control viral diseases in aquaculture and future trends 254
9.6 References 259

10 Diet and husbandry techniques to improve disease resistance: new technologies and prospects 267
F. J. Gatesoupe, INRA-Ifremer, France
10.1 Introduction 267
10.2 Fighting the pathogens 268
10.3 Improving welfare 273
10.4 Improving feed 276
10.5 Concluding remarks 289
10.6 Sources of further information and advice 290
10.7 References 291

Part III Diet and husbandry 313

11 Fish larvae nutrition and diet: new developments 315
S. Kolkovski, Dept of Fisheries, Australia, J. Lazo, Fish Nutrition Laboratory, Mexico, D. Leclercq, ACUI-T, France, and M. Izquierdo, Grupo de Investigación en Acuicultura, Spain
11.1 Introduction 315
11.2 Determination of nutritional requirements of larvae 319
11.3 Nutritional requirements of fish larvae 322
11.4 Feed identification and ingestion 332
11.5 Ontogeny of digestive capacity in marine fish larvae 336
11.6 Digestive system capacity 343
11.7 Diet manufacturing methods 346
11.8 Microdiet characteristics 349
11.9 Feeding system 354
11.10 Dosage system 355
11.11 Future directions 359
11.12 References 360

12 Aquaculture feeds and ingredients: an overview 370
R. Hardy, University of Idaho, USA
12.1 Introduction 370
12.2 Sustainability of feed ingredients 371
12.3 Safety of farmed fish products from harmful residues and pollutants 374

12.4 Categories of environmental pollutants and residues comprising risks to the safety of farmed fish products 375
12.5 Alternate protein and lipid sources 378
12.6 Future trends 383
12.7 Sources of further information and advice 383
12.8 References 384

13 Ingredient evaluation in aquaculture: digestibility, utilisation and other key nutritional parameters 387
B. Glencross, CSIRO Marine and Atmospheric Research, Australia
13.1 Introduction 388
13.2 Characterisation and preparation of ingredients 390
13.3 Defining ingredient digestibility 393
13.4 Ingredient palatability 399
13.5 Defining effects on growth and utilisation 402
13.6 Ingredient functionality and feed technical qualities 408
13.7 Frontier technologies for ingredient evaluation 408
13.8 References 410

14 Quantifying nutritional requirements in aquaculture: the factorial approach 417
I. Lupatsch, Swansea University, UK
14.1 Introduction 417
14.2 Quantification of nutritional requirements 419
14.3 Feed ingredient evaluation 431
14.4 Feed formulation and feeding strategies 433
14.5 Future trends 437
14.6 References 438

15 Advances in aquaculture nutrition: catfish, tilapia and carp nutrition 440
D. Davis, Auburn University, USA, T. Nguyen, Nong Lam University, Vietnam, M. Li, National Warmwater Aquaculture Center, USA, D. M. Gatilin III, Department of Wildlife and Fisheries Sciences, USA, and T. O'Keefe, Aqua-Food Technologies, Inc., USA
15.1 Introduction 440
15.2 Nutrient requirements 443
15.3 Sources of further information and advice 456
15.4 References 456

16 Advances in aquaculture feeds and feeding: basses and breams 459
M. Booth, New South Wales Department of Primary Industries, Australia
16.1 Introduction 459
16.2 Asian seabass 461
16.3 Red sea bream and gilthead sea bream 466
16.4 Grouper 476
16.5 Future trends 483
16.6 References 484

17 Advances in aquaculture feeds and feeding: salmonids 498
S. Refstie, Nofima Marin and Aquaculture Protein Centre (APC), Norway, and T. Åsgård, Nofima Marin, Norway
17.1 Introduction 498
17.2 Feed technology and formulation 500
17.3 Digestive physiology 501
17.4 Nutritional requirements 506
17.5 Nutrition and health 507
17.6 Dietary additives 511
17.7 Species differences 514
17.8 Practical formulations 515
17.9 Feeding and feeding systems 517
17.10 Future trends 518
17.11 References 522

18 Monitoring viral contamination in shellfish growing areas 542
F. S. Le Guyader and M. Pommepuy, Ifremer, France, and R. L. Atmar, Baylor College of Medicine, USA
18.1 Introduction 542
18.2 Source of pollution 544
18.3 Methods 550
18.4 Input and flux 553
18.5 Strategies for reducing contamination 562
18.6 Other issues 565
18.7 Future trends 568
18.8 References 569

19 Impacts of harmful algal bloom on shellfisheries aquaculture 580
Y. Matsuyama, National Research Institute of Fisheries and Environment of Inland Sea, Japan, and S. Shumway, University of Connecticut, USA
19.1 Introduction 580
19.2 Global increase of harmful algal blooms (HAB) 581
