how they want it.

Determining the Reliability of Information

Although there is no automatic way of determining the reliability of the information we receive, comparing the metrics from different sources can provide a background to the information's accuracy and validity. When information appears on multiple outlets, scanning their sources can help determine to some degree its reliability. In addition, having a prior base of knowledge can be a benchmark for determining reliable and unreliable information. Formal education provides knowledge that can be used as a basis for testing the reliability of what we hear,
