

MS General Psychology
Comprehensive Examination Essay
Assignment

Fall 2024

Expected length of the paper is a minimum of 15 pages (abstract and references **NOT** included).

Please submit your paper to Dr. Alex Cucat at acucat@nova.edu by Monday, October 23, 2024.

Paper Assignment Topic:

The topic of intelligence measurement has been a constant debate in the field of psychological research for over a century. Please write a review of how human intelligence has been conceptualized and measured in psychology and highlight some of the errors as well as the successes in pursuing a unified measure of intelligence (i.e. the concept of Intelligence Quotient IQ) versus the more recent approach to conceptualizing intelligence as a collection of multiple abilities (e.g. the concept of multiple intelligences).

APA writing style is required. Turnitin.com will be used to check plagiarism and a score of AI will be calculated to measure the use of internet sources. Only peer-reviewed journal research and book chapter references will be accepted for primary and secondary source material applied to your discussion. Note: Minimum pages of fifteen (not including the References and Abstract pages); no maximum limit.
