### Should Bottled Water Be Banned Or Not ?

How will banned water bottles help reduce waste around the environment we live in?

Banning water bottles comes with pros and cons. The pro of banning water bottles will help our environment with less waste and less contamination. Also another pro with banning water bottles will help with the percentage of recycling. The cons of banning water bottles as the population will have a higher chance of the people surrounding our environment decreasing the purchase of water. Bottle water makes traveling alot more suitable such as packing lunch, taking trips or even if an individual is on the run. Bottle water can save time managing for an example what if you have to be self medicaid and need to take medication? Having that bottle of water just saves the time you needed to self medicaid yourself. In an addition thinking logical while at an outing or on the road, or just at the beach on a hot sunny day who wouldn't love an ice cold bottle of water? Understanding after the bottle might become empty individuals have a habit of littering which causes a higher level of waste, To solve waste issues increasing more waste baskets in the neighborhood with lids can help. Previously stated in the article “ Globally theirs about 20,000 plastic bottles purchased every second”. Cutting back will become a huge decrease in the numbers from billion dollar companies. If the numbers decrease from 20,000 every second from billion dollar companies such as Poland Spring,

Nestle Pure Life and Fiji just to name a few water companies this can affect their business tremendously. Decreasing from such a huge number will affect the companies money, which will also affect jobs from individuals that are needed to provide to our economy.

Banned water bottles just don't sit right with other opponents because of the major effect it takes on the world as a whole. As a huge population this affects a lot of individuals and billion dollar companies profits. Removing bottle water increases artificial drinks, which is very unhealthy to our bodies. Artificial drinks are filled with nothing but sugar which can increase more diabetics. Take a moment and think about the diabetics that are not supposed to have sugary drinks or just a person who doesn't like sugar at all. Tap water will be a replacement for bottle water which isn't so tasteful. Tap water is more contaminated and doesn't have any known history of where it's being distributed from. Knowing the history where bottle water comes from which manufacturer provided the bottle water makes individuals more comfortable with drinking the water.

In conclusion banning water wouldn't be the best decision to make. Yes banning water does come with its own Pros and Cons, but as the economy everyone needs pure water to survive. Therefore, having bottled water the Pros outweigh the Cons. Having bottle water helps keep individuals happy and healthy. In addition, keeping bottled water around and not banned gives the knowledge of what is going inside your body. Keeping bottle water

around also helps keep billion dollar companies running and any parties that are affiliated with the company not losing any profit due to the cut back of banning bottled water.
