

Since this is an online course, you don't get to do your presentation in front of a class. Instead, you make a presentation video **with you speaking** and upload it using the "Submit" button in this assignment. Your presentation could be a PowerPoint presentation with you recording your voice (embedded into the PPT file), **OR** your presentation can be a video of you presenting it. It's your choice!

What you should be submitting: **YOU...actually presenting your presentation, as an oral presentation (you speaking) with a "bibliography" or "Sources Cited" at the end.**

Your presentation should be about 7 to 10 minutes long (probably about 10 slides) and should include the use of visual aids (pictures, models, and/or samples). You should include a bibliography (three sources of information) at the end of your presentation. Upload your presentation file here in Canvas using the "Submit" button to attach your file and upload it. Note that video files can grow very large, so keep the resolution lower to keep the file size reasonable.

The Presentation (two choices): Choose a topic where you could...**either**...

1/ Expand upon one of the topics explored in this course ...**or**...

2/ Research a serious construction accident (or two).

**Focus on describing the role of OSHA on construction sites and in construction accidents.
Discuss the role of project management in coordinating safety on construction sites.**
