Midterm exam questions

- A 3-year-old child who has asthma is in the clinic for a well-child checkup. The nurse notes that the child is up to date for the DTaP, hepatitis A, hepatitis B, and the MMR vaccines but has only had one each of the Hib, the rotavirus, and the PCV13 vaccines. Which vaccine will the provider prescribe for this child?

 - a. PCV13 and Hib
 - b. PCV13
 - c. Rotavirus
 - d. Hib
- A patient taking high doses of a glucocorticoid develops weakness in the muscles of the upper arms and in the legs. What action will the provider take?

 - a. Reassure the patient that this is an expected side effect.
 - b. Reducing the dose of the glucocorticoid medication
 - c. Discontinue the medication immediately.
 - d. Encourage the patient to restrict sodium intake.

Midterm exam questions

1 * A patient takes oral theophylline twice daily for chronic stable asthma. After developing an infection, the patient went to an after-hours clinic where ciprofloxacin was prescribed. What should the patient's primary provider take when the patient follows up the next day?

- a. Increase the theophylline dose.
- b. Discontinue the theophylline and prescribe a long-acting β agonist.
- c. Prescribe a different antibiotic.
- d. Reduce the theophylline dose.

2 * A patient has been diagnosed with fungal otitis externa (otomycosis). What will the provider prescribe initially?

- a. Antifungal ear drops for 14 days.
- b. Intravenous (IV) antifungal agents.
- c. Oral antibiotics for 7 days.
- d. Acidifying ear drops for 1 week.
