

Assessment 01 – Locating Credible Databases and Research

Create a 2-4 page resource that will describe databases that are relevant to EBP around one of the diagnoses below and could be used to help a new hire nurse better engage in EBP.

Before you complete the instructions detailed in the courseroom, first select one of the diagnoses below. You will use this diagnosis in subsequent assessments.

- **Urinary Tract Infection (UTI):** An infection in any part of the urinary system, including kidneys, bladder, or urethra.
 - **Interventions:** Antibiotic therapy, increased fluid intake, urinary analgesics, and bladder training.
 - **Keywords:** Cystitis, pyelonephritis, bacteriuria, dysuria, urinary frequency.

- **Deep Vein Thrombosis (DVT):** A blood clot that forms in a deep vein, usually in the legs.
 - **Interventions:** Anticoagulant therapy, compression stockings, leg elevation, and patient education on mobility.
 - **Keywords:** Venous thromboembolism, pulmonary embolism, clotting factors, INR monitoring, heparin.

- **Cellulitis:** A common bacterial skin infection that can spread to other parts of the body.
 - **Interventions:** Antibiotic therapy, warm compresses, elevation of the affected area, and wound care.
 - **Keywords:** Skin infection, erythema, edema, abscess, staphylococcus.
