

Write a letter to Mr. Eric Salamanca, Acting Electrical Commissioner of the department of Home Affairs, Providenciales about going green and the benefits it serves to the country. Be sure to identify the advantages:

- Lessen global warming
- Improve public health
- Provides jobs and other economic benefits
- Stable energy prices
- Reliability and resilience (doesn't rely on the main power source)

Students must also speak on the negative aspects of the country 'going green', from the point of view of the government:

- The cost of materials needed
- The manpower needed to start

*discusses some more*
