

Assignment 3: Work-in-Progress #1 Due 4/6 8:30AM

Research to answer these questions and create a PowerPoint illustrating the results of your research. This exploration is not constrained by the model we are building:

- In what interior environments would pocket doors be best suited?
 - Give best practices and examples in residential & commercial environments
 - Where are they not suited?
 - When are they and when are they not ADA compliant?
 - What building codes impact how a wall is constructed?
 - What building codes impact how a door is constructed?
- How can design elements and principles be used to evaluate which pocket door assemblies are best used in specific wall systems?
 - How are walls assembled and designed?
 - How are pocket doors assembled and designed?
 - What are the design elements (color, line...)?
 - What are the design principles (balance, emphasis...)?
 - How can you incorporate design elements and principles in the construction of walls with pocket door assemblies?

Presentation – discussion board: post PDF of your PPT on discussion board by 8:30AM.

Work on Assignment 3 and continue replying to colleagues on DB (closes 11:59PM 4/12)
