 View Report Summary

lar disease for granted since it complicates with time. In this case, many suffer from the stigma that affects the disease process's severity and the capability of having normal work and social experience. ② If identified at an early stage, the disease is treatable with the help of psychotherapy and medication. Hence, healthcare professionals should embrace a good relation with bipolar disorder patients for effective care (Jamison, 2019). ② The current study is about an Asian American woman who is suffering from bipolar disorder. The woman is 26 years old and is of Korean descent. ② There are suggestions of three suitable and safe options for her treatment and a description of their possible outcomes. She has a height of 5'5" and weighs 110 lbs. ② Lab studies relative to her condition were regular, and the genetic test report shows that she has a CYP2D6*10 allele. She speaks under pressure and rapidly, and her dress sense gets odd in each appointment. ② However, she denies suicidal ideation and hallucination.
