

Extra Credit

Due Friday 10/12/12

To obtain extra credit which will be added to your Exam 1 grade, you must complete the Mini-Project on page 231-232 parts a – d. Each part will be worth one extra-credit point for a total of four points. I expect your work to be clean and neat. Work independently, this is part of an exam. I will be grading your work for neatness, accuracy, and precision.

Specifically what I will be looking for:

- Cite each source you use (Wikipedia is an appropriate source for this project)
- Typed/neat format and clean mathematics (I do not want scribbled out work/uncleanly erased work). You may type your math using Microsoft Equation Editor, Math Type, or some other editor if you have one.
- I expect you to show all of your work with detailed steps
- A graph for each table (use Excel or another graphing program to create a scatter plot) along with your regression line plotted on the same chart)

If you have any questions please ask.
