

Table #2 is attached on the back! Thanks!!

*Only need help with 3-7

Probability

Mr. Jones wants to study voting patterns. He calculated that, on average, 60% of adults vote. He obtained a random sample of 20 adults. Answer the following questions:

- 49 X 1. If in his sample, 12 people voted, what is the probability of picking a voter out of his sample? How does this probability compare to the population data? (2 pts)
- X 2. What is the probability of NOT picking a voter? (1 pt)
3. If Mr. Jones picked another sample of 20 adults, using Table 2, what is the probability of having 10 or more voters? (2 pts)
4. What would be the probability of having 5 or fewer voters? (2 pts)
5. What is the expected number of voters one would have in a sample of 20? (2 pts)
6. How does Mr. Jones' earlier sample data compare to this expected number? (1 pt)
7. Could one expect to get at least 10 voters in a sample of 20? Why or why not? (1 pt)

Binomial Probability Distribution $C_n p^r q^{n-r}$

This table shows the probability of r successes in n trials.
