

	1 <sup>st</sup> dimension (Resources)	2 <sup>nd</sup> dimension (Process and rules)	3 <sup>rd</sup> dimension (Meaning and symbols)
Interaction of a & b	Overt conflict	Overt/covert conflict	Apparent cooperation and can be quite covert
Power of a over b	More resources and sources of power (Glengarry)	Control of processes (The Key, The nurse in one flew over the cuckoo's nest)	Control of legitimacy
Action of a	Manage dependencies (who gets leads)	Manage process (who is at the table, what gets discussed i.e. deciding nutritional labels)	Manage meaning (how is issue framed - do not say taxes, lets discuss entitlements, unlawful combatants)
Political dynamics	B is aware and can access decision making (sales force makes appeal, but decisions are downtown)	B is aware but cannot access decision arena	B is unaware and does not resist (The product says natural it has to be good)
If b loses it is because	Cannot mobilize resources (Moss try's to resist, but cannot do so effectively)	No access (feels like a stacked deck)	No will (Many Americans appear to vote against policies that would benefit them, because the policies are seen an un-American)
Empowerment of b requires	More resources (Roma has expertise)	Access and knowledge of process (Can be double edged sword like in the key)	Awareness, challenges to legitimacy (i.e. Sacred waters, the symbolic nature of the hospital)

System power and power relations: Look for issues of identity where people are stuck playing role. The feeling of I am supposed to do this (even if there is an internal voice saying this is not what I want). Shooting the elephant.
