

From the psychologists, when measuring how people perceive the daily activities, it is evident that parents would prefer to do the other chores rather than do the parenting work. The findings are normally bitter to swallow with consideration of the love that parents feel for their children. A parent can talk about their children in many occasions and applaud them all because of the parental love. The scientific researches slightly differ with the normal feeling by the parents. Normally, a lot of money is paid for anything that makes one happy, and there is an assumption that if there is anything that will oblige us to pay a lot of money for it, it's obvious that the result is happiness. Therefore, the responsibility that the parents have as well as the sacrifice that parents make for the children is entitled to the happiness that they expect to get from them (Daniel, 2006).

Research findings also contradict with the scientific data since even with mistakes that children make and the tiresome feeling in the parenting work, there is a fact that a lot of memories inflicted at the parents minds after repayment by a small deed by the children. With comparison to the effect of heroin in people lives it has been found that even though heroin can cause a lot of misery in people's lives, the feeling of happiness that it brings to others is what matters, and this is what makes people crave for it more and more.

Therefore, even though children might bring misery, they can make parents happy as well. However, all factors considered, it is evident that children are not the key source of happiness, but it is not a bad thing as they are not obliged to. With this fact, parents still would want to have the children anyway, and it is for this reason that Sonora realized that her father made a lot of sacrifice for them (Daniel, 2006).
