

RETRACTABLE PACIFIER

Invented By
Charriyse Waiters

**The Pacifier Has a retractable
cord That goes Back Into Place.**

The Retractable Pacifier is for parents and toddlers on the go. The Retractable Pacifier will be an inch to a inch and a half in width. Very similar in the design of a standard watch. Where the dial of a watch would be, you will have the Pacifier attached to the bracelet. The bracelet will be made of nylon and attach by an adjustable Velcro band. The retractable chord will be located within the top of the bracelet, similar to where you have the watch face. The pacifier will attach to it by sliding the ring of the pacifier into a female end groove. The bracelet will be fashionable as well as provide a secure location to easily access the pacifier. The Retractable Pacifier will eliminate drops, misplacement and allow for easy identification. The bracelet can have the child's name engraved or written on it, its very useful in a crowded area where a child can get lost.
