Effects of Sex before Marriage on the Community and Future Generations

The research topic is "Effects of Sex before Marriage on the Community and Future Generations." In the research I want to prove whether sex before marriage has some given effects on the community and future generations. Justifying the topic will require some proof. This needs the use of existing research on the same or related topics, ^{and} The evaluation will require some sources. One of the sources that I'm considering for my research paper is a book titled "Hooked: New Science on How Casual Sex is Affecting Our Children," by Joe S. McIlhany Jr, and Freda McKissic Bush. I will be evaluating the source to prove that it is a credible source, which can help me in the research paper. In doing this, I shall look at the author's credentials, their focus in relation to my research paper, looking at the publisher, publication date, and other aspects that can help to verify the credibility of the source.

Authors credentials

The authors of ~~the~~ Hooked are Joe McIlhany and Freda McKissic. Joe McIlhany is an obstetrician-gynaecologist who has ~~in the past~~ served in the Presidential Advisory Council dealing with HIV/AIDS, He has also served at the Advisory Committee under the Director of Centers for Disease Control and Prevention (CDC). Additionally, McIlhany, ^{for how long? when? Provide dates} is a chairman and founder of The Medical Institute for Sexual Health. ~~He has been married to his wife for about forty seven years, and lives in Austin~~ On the other hand, Freda McKissic has served on the board of certified ob-gyn for over twenty one years. ^{use a different phrase} Presently, McKissic serves in the ^{currently,} Presidential Advisory Council on HIV/AIDS. Additionally, McKissic is serving in the clinical faculty at the University of Mississippi Medical Center, which is in the Departments of family and ob-gyn practice. ~~McKissic is a mother of four and lives in Jackson.~~ The

author's credentials indicate they are credible and worth put on the research paper. Their educational background, work experience, publications, affiliations, and profession give them a moral standing in the topic of research.

Appropriate Focus

In my research topic, I look at the effects of Sex before Marriage on the Community and Future Generations. ~~I tend to find out~~ ^{I intend} the given outcomes that sex before marriage has on the society. The research involves young adults and adolescent groups that engage in sex before marriage (McIlhaney and Freda 39). Therefore, I found "Hooked" useful and informative on the topic. "Hooked" does have research and statistics on young adults that engage in sex before marriage. In the book the authors tackle the chemical changes, which take place in the brain. It offers a good description of the events that are behavioural and verifiable scientifically. The information helps to appreciate why young adults engage in sex. Likewise, in my research topic, I look at what motivates the young adults to have pre-marital sex and how this later affects their lives in the society. In my argument, I try to indicate that sex before marriage is just a behaviour conditioned over time, and it can be changed. Other researches indicate that tolerance frustration and delay gratification can be significant in having successful and happy life.

Needs quote
from the
book*

~~Sex before marriage can lead to irresponsible behaviour and delay in gratification. This can explain the increase in family and marital fragmentation, sexually transmitted diseases, suicide ideation, criminality, self-centeredness, selfishness, lack of concern, sensitivity, and compassion to others, hostile intolerance to others views, and sociopathic behaviour. Therefore, in my research topic, I urge the young adults to weigh the immediate and long term gratification behaviour on the life and impact on the society and future generation. They need to be more respectable to other person's attitudes, values, and feelings. Likewise, they should return to superior civility.~~

Publication Date

Almomen 3

Hooked was published in August 1, 2008 by Northfield Publishing Company. The organization has a good reputation and has published various books in the market. The book has 176 pages and is published in English. It is a very popular book for readers interested in topic relating to pre-marital sex. Further, "Hooked," simple and easy to understand. It utilizes easy vocabulary, good examples, and pictorials that help to explain some complex ideas. For example in the definition of sex, McIlhaney and Freda (S) says "any intimate contact between two individuals that involves arousal, stimulation, and/or a response by at least one of two partners." ← (McIlhaney and Freda, S).

In the evaluation of the book "Hooked," it is clear the book is helpful in my research topic. The book has passed most of the tests and talks about a topic which links to my research topic. Therefore, I will use the book as it will give me some insights about the brain in relation to sex before marriage among the young adults. Further, it is a reputable source from a credible publication body. The section of "Hooked" that talks on brain role in sex is the one which is so helpful in my research. It assists me to appreciate and examine the activity of the brain in relation to sexual behaviour. This helps me to link the risk of sex before marriage and the effects it has on the community and future generations. "Hooked" explores the evolving neuroscience aspect in explaining the psychological effects of premarital sex.
