Useful Factors of Technology

Nowadays we use technology almost everyday in our daily life, which change our thinking, perception to view things and make us the modern people in this world. There are many people who think that technology leave^{sa} bad effect on human health, mind, thinking and every aspect of life. Technology makes life busier than previous, also makes us lazy. However, on the other side, when we see the benefits and advantages of technology that are not counted, and useful to give ease in every perspective of our lives. I ^{will try} ~~tried~~ to show you the benefits of technology and the role of technology in our routine life specifically the role of Smart phones. Smart phones change our life entirely, and provide us the entire world in your hand with only some clicks.

Also I use smart phone in almost everything I do every day and I found really useful for me.

It is the basic necessity and essential part of our life today and we cannot live without it ^{ok, but is this good or bad according to you?} now. It is the thing, which advances our every perspective of life includes, possibility to travel, keep in touch with friends with video and audio chat and telephonic conversation. Technology gives us more freedom and choices, which makes our life balances in society. Moreover, the technology has also played an important role to shape the future and may help to make our future

better. It can benefit to develop clean energy, transportation possibilities with less emission and less use of our resources.

Moreover, The technology is a way that will help to discover new ways and processes, which will be the great choice for the future technology. ^{However,} There are many people who think that technology is the thing that destroy and make our self away from the routine of life and use of technological perspectives while they also fascinate and use the many flexible and modern changeable aspects of technology in their routine of life such as watching TV, playing video games and the most important use smart phones to ease their lives with the most unique and admirable invention of technology in the form of a smartphone.

Smartphone have smarter capabilities, features and new essential functions in our phone.

The name shows and proves that it is actually smartphone. Smartphone manufacturers provide all the futures that are found in all key technology in their smartphones. These are the facilities that give the new future to our life and connection with others with a few clicks or moves. A smartphone has many extended capabilities such as high quality camera lenses, mobile apps, productivity aids, video and audio streaming and the most important function is connected which vanishes all the distances between us.

There are some expectations and need of people who wish that smartphone develop on those lines in nearest future. Therefore, the prediction about any new technology is not an easy task, but we can just assume about that new changes in the use of technology in the smart phones production process. We just make some wild guesses that don't tend to be current and may observe in future in smartphone aspects. A couple of features for smartphones will become the focal points for the development in future.

yes we know
are of
this stuff.
you
need to
focus on
the
rhetorical
issues.
What are
big
social
questions?
Develop
your
voice
and contributions.

Augmented reality is the technology that has the context of computer technology and preserve through our sense. It can be more enhance and enrich by the use of computer generated sensory input like video, graphics GPRS data, searching, and finding ways. Augmented reality will be available in the future with more informative material for the users by mingling computer data to the real life facts. Due to portability of Smartphones, it serves us a good platform for augmented reality to network. You can just touch your smartphones and get connected to a WI-Fi hotspot in your area and search online wherever you are. Augmented reality also offer the Global positioning System to facilitate for locations, addresses and search features about the most nearest dinning, grocery stores.

The one more future expectation from smartphones manufacturers is flexibility in phone screens. We can see that there are many smartphones in the market with wide and broad screen in portable size, but it cannot be folded and easy to handle it. It will be the possibility in the nearest future that screen of a smartphone can be folded by the help of the Organic Light Emitting Diode Technology. This technology will help to use your smartphone from both sides and use all features. Physical flexibility is the most beautiful idea for smartphone users, so there are many companies who are trying to implement this technology and be the first company for the launch of this technology in the world of smartphone.

In built projector is the one more disastrous wish from smartphone makers and will get success in it. There are some companies trying to build in Digital Light Projection that can be used as the WVGA projector and have features to project data from smartphones at up to 50 inches in size at 15 Lumens. Now our smartphones turned to interactive gaming console without TV screen, you can play all you wish on your smartphone and can easily control all features of it. While smart voice control receives much attention to the linkage of voice recognition functions.

In smartphone growth, there are many visible developments of voice control and proved as the paramount tasks.

Technology has various benefits and the biggest arguments against technology to sometime high cost and limit to reach people easily. There are some key benefits that are become the use of technology in our lives. Technology makes easy communication from anywhere to anyone. It also helps to promote education and enhance the educational system with projectors use and computer use. Technology plays a vital role in the health care system and health care facilities like robotic surgery. Technology is the basic necessity of our business and professional life. In fact, there are almost all projects are possible by the use of technological perspectives and help to increase income with positive results.

you need to focus and use examples of this, not just say it is the case.

Give us specific ways this occurs.

You seem to know a lot of information regarding technology here, but you lose sight of the fact that you need to use some of this info to help make an argument. I don't see how you are making a specific statement. What exactly are you trying to persuade us to think here? You have to work on developing your voice and contributions.
