

Discuss an example of a current decision-making situation, in either your professional or personal life, for which you believe it would potentially be beneficial to apply the quantitative analysis technique(s) being examined during the current week, or any of the preceding weeks of the course. You shall be expected to select a situation that involves a decision-making process that is both complex and involves important outcomes. Your posting shall be expected to address all of the following matters:

1. Describe the situation in detail, including describing the complexity of the decisions being made, the importance of the decisions being made, and the manner in which decisions are currently being made.
2. Describe in detail how you envision being able to apply the proposed quantitative analysis technique(s) to the described situation.
3. Describe in detail how you envision applying the proposed quantitative analysis technique(s) would potentially improve decision-making relative to the described situation.
4. Describe in detail the potential benefit(s) that you believe would be derived from improving decision-making relative to the described situation.
5. Describe in detail any potential impediments to applying the proposed quantitative analysis technique(s) to the described situation that you might foresee, and how you envision potentially being able to overcome them.

A posting of approximately one page in length (single spaced, using a 12-point Arial font) would be considered appropriate for your original posting
