

Summary Assignment 1

Alfaleh 1

Artificial intelligence of the computers has been changing drastically over the years, and its evidence is supported by numerous current state of digital and anticipatory work of Dr. Johnson on advent of computer intelligence. Dr. Johnson noted that the earlier electronic computers were less developed and less intelligent. ^{we today} Nowadays computers can be trained to learn by experience, follow an argument, ask crucial questions, carry out distracted conversations excellently and write incredibly wonderful music and poems. ^(cite)

Computers lack emotions and drives however drives can be programed and into the brain of the computer, the same way as nature programmed them into the brains of the human ancestors. Motivated Computers can work better and fast than human beings and make accurate decision fast than people during crisis. Human beings still dominated computer, however, computer intelligence and reasoning power is growing fast, and soon human being will have to be working amicably with ultra-intelligent machines in symbiotic manner. Dr. Johnson anticipated that partnership between ultra-intelligent machines and human beings will be short-lived due to ever evolving intelligence of the computers however, growth of human intelligence does not mean it has stopped; it grows very slowly as compared to growth and evolution of computer intelligence. Dr. Johnson argues that human

curiosity is satisfied at every level of technological advent and people should not be surprised or shocked of any new inventions in future.
