Assignment 3: Dropbox Assignment

Course Project—Part 1: Storyboarding

This week, you will start work on a detailed course project, and you will be adding to the project as you progress with the course each week.

This week, you will begin by creating a storyboard for an application.

Using any graphic resources, such as scanning hand-sketched paper drawings or using Microsoft Paint or Adobe Photoshop, create a simple storyboard to examine a possible project and unify a team around a design.

To do so, complete the following tasks:

- In a 2- to 3-page Microsoft Word document, propose an application, that is, small software which performs a service on a mobile device or on a smart phone or tablet.

Make the purpose small and achievable. For example, imagine an application that constantly keeps you updated on what is happening in the class, with classmates posting and commenting on your work and assignments. Be sure to explain the purpose of your proposed application.

- Create at least six screens representing various states of the interface depending on what the user does or selects. Using images, demonstrate how an application like this might work: Open and close screen options and simple branching.

Note: Do not use any video in this application. Just develop a storyboard, which can be created on paper and then scanned or use Drawing or Diagramming in
