 Lab Section _____ I was present and performed this exercise (Initials) WR

Spread Plate Method of Isolation

OBSERVATIONS AND INTERPRETATIONS

Record your observations in the table below.

Organism	Plate(s) With Isolation	Comments
<i>E. coli</i>	Buff colored colonies	
	slight colored colonies; for most part are filmy or translucent	results were not as expected. Colonies were colorless and should have resulted in red/orange colonies
<i>S. marcescens</i>		

QUESTIONS

- 1 On which plate did you obtain isolation with *E. coli*? How about *S. marcescens*? Do you have reason to suspect that they should become isolated on the same dilution plate? Why or why not?
