

## Decision Point

## *Marketing in Schools*

Is there an age at which children are too young to be the targets of commercials and marketing? Is every person, regardless of age, a potential consumer? The market potential of young people is huge. According to one 2001 report, children's spending tripled in the 1990s. Children between the ages of 4 and 12 spent \$2.2 billion in 1968, \$4.2 billion in 1984, \$17.1 billion in 1994, and more than \$40 billion by 2002. Estimates are that direct buying by children is expected to exceed \$51.8 billion by 2006. This makes young people an attractive target for marketers, and where better to target marketing than in schools?

Commercials in schools occur in many forms. Products are directly advertised in a variety of formats and circumstances, including on school buses and through Channel One, a for-profit media company that produces news programming shown daily in thousands of middle and high school classrooms. Indirect advertising occurs with sponsorships of school activities and supplies. Many products are sold in and by schools and many schools participate in a variety of marketing research studies. In every case, schools provide the occasion for students to learn about some commercial product.

- Should advertising be allowed in schools?
- What facts would you want to know before deciding this question?
- What alternative marketing practices are open to companies that sell products to children? If some school districts propose advertising on and in buses, which are public property paid for by tax dollars, does that raise additional issues?
- Who are the stakeholders of your decision? What is the impact of each alternative decision on each stakeholder you have identified?
- What rights and duties are involved?
- How would you decide the case? Is it mostly a matter of consequences, or are important principles involved?
