

of mind that can be isolated, identified, and used by almost anyone. Though there's certainly no substitute for expertise and for knowing as much as possible about one's topic, the arguments that finally win the day are built, as the title of this chapter suggests, on some very basic rhetorical patterns that most of us use on a daily basis.

There are a great many ways to respond to others' ideas, but this chapter concentrates on the three most common and recognizable ways: agreeing, disagreeing, or some combination of both. Although each way of responding is open to endless variation, we focus on these three because readers come to any text needing to learn fairly quickly where the writer stands, and they do this by placing the writer on a mental map consisting of a few familiar options: the writer agrees with those he or she is responding to, disagrees with them, or presents some combination of both agreeing and disagreeing.

When writers take too long to declare their position relative to views they've summarized or quoted, readers get frustrated, wondering, "Is this guy agreeing or disagreeing? Is he *for* what this other person has said, *against* it, or what?" For this reason, this chapter's advice applies to reading as well as to writing. Especially with difficult texts, you need not only to find the position the writer is responding to—the "they say"—but also to determine whether the writer is agreeing with it, challenging it, or some mixture of the two.

ONLY THREE WAYS TO RESPOND?

Perhaps you'll worry that fitting your own response into one of these three categories will force you to oversimplify your argument or lessen its complexity, subtlety, or originality. This is

certainly a serious concern for academics who are rightly skeptical of writing that is simplistic and reductive. We would argue, however, that the more complex and subtle your argument is, and the more it departs from the conventional ways people think, the more your readers will need to be able to place it on their mental map in order to process the complex details you present. That is, the complexity, subtlety, and originality of your response are more likely to stand out and be noticed if readers have a baseline sense of where you stand relative to any ideas you've cited. As you move through this chapter, we hope you'll agree that the forms of agreeing, disagreeing, and both agreeing and disagreeing that we discuss, far from being simplistic or one-dimensional, are able to accommodate a high degree of creative, complex thought.

It is always a good tactic to begin your response not by launching directly into a mass of details but by stating clearly whether you agree, disagree, or both, using a direct, no-nonsense formula such as: "I agree," "I disagree," or "I am of two minds. I agree that _____, but I cannot agree that _____." Once you have offered one of these straightforward statements (or one of the many variations discussed below), readers will have a strong grasp of your position and then be able to appreciate the complications you go on to offer as your response unfolds.

Still, you may object that these three basic ways of responding don't cover all the options—that they ignore interpretive or analytical responses, for example. In other words, you might think that when you interpret a literary work you don't necessarily agree or disagree with anything but simply explain the work's meaning, style, or structure. Many essays about literature and the arts, it might be said, take this form—they interpret a work's meaning, thus rendering matters of agreeing or disagreeing irrelevant.
