

Select a task that a program could perform over an array of items that would be used by a small business.

Mater
Ch. 7, F

Your task must include the following:

- Declaring array
- Populating the array
- Processing the items in the array
- Outputting the results of the processing (this may or may not include displaying the entire array)

You can build on your effort from a previous week or tackle a new challenge.

Obtain approval from your instructor for your items by sending a Private Message. You cannot recreate any examples given in our text.

Create a 1/2-page Word document, following APA format, including the following:

- A brief description of the task
- The pseudocode associated with the task. Base the pseudocode on the examples provided in Ch. 7 of Prelude to Programming.

Create a Visual Logic® file to execute the task.

Submit all files using the Assignment Files tab.
