

begin their letters, they are forced to think about the underlying issue of sexism. This is good because as a problem that begins in people's assumptions and expectations, it's a problem that will be solved only when a great many people have given it a great deal of thought.

For Argument's Sake: Why Do We Feel Compelled to Fight About Everything?

Deborah Tannen

1 I was waiting to go on a television talk show a few years ago for a discussion about how men and women communicate, when a man walked in wearing a shirt and tie and a floor-length skirt, the top of which was brushed by his waist-length red hair. He politely introduced himself and told me that he'd read and liked my book *You Just Don't Understand*, which had just been published. Then he added, "When I get out there, I'm going to attack you. But don't take it personally. That's why they invite me on, so that's what I'm going to do."

2 We went on the set and the show began. I had hardly managed to finish a sentence or two before the man threw his arms out in gestures of anger, and began shrieking—briefly hurling accusations at me, and then railing at length against women. The strangest thing about his hysterical outburst was how the studio audience reacted: They turned vicious—not attacking me (I hadn't said anything substantive yet) or him (who wants to tangle with someone who screams at you?) but the other guests: women who had come to talk about problems they had communicating with their spouses.

3 My antagonist was nothing more than a dependable provocateur, brought on to ensure a lively show. The incident has stayed with me not because it was typical of the talk shows I have appeared on—it wasn't, I'm happy to say—but because it

exemplifies the ritual nature of much of the opposition that pervades our public dialogue.

Everywhere we turn, there is evidence that, in public discourse, we prize contentiousness and aggression more than cooperation and conciliation. Headlines blare about the Starr Wars, the Mommy Wars, the Baby Wars, the Mammography Wars; everything is posed in terms of battles and duels, winners and losers, conflicts and disputes. Biographies have metamorphosed into demonographies whose authors don't just portray their subjects warts and all, but set out to dig up as much dirt as possible, as if the story of a person's life is contained in the warts, only the warts, and nothing but the warts.

It's all part of what I call the argument culture, which rests on the assumption that opposition is the best way to get anything done: The best way to discuss an idea is to set up a debate. The best way to cover news is to find people who express the most extreme views and present them as "both sides." The best way to begin an essay is to attack someone. The best way to show you're really thoughtful is to criticize. The best way to settle disputes is to litigate them.

It is the automatic nature of this response that I am calling into question. This is not to say that passionate opposition and strong verbal attacks are never appropriate. In the words of the Yugoslavian-born poet Charles Simic, "There are moments in life when true invective is called for, when it becomes an absolute necessity, out of a deep sense of justice, to denounce, mock, vituperate, lash out, in the strongest possible language." What I'm questioning is the ubiquity, the knee-jerk nature of approaching almost any issue, problem or public person in an adversarial way.

Smashing heads does not open minds. In this as in so many things, results are also causes, looping back and entrapping us. The pervasiveness of warlike formats and language grows out of, but also gives rise to, an ethic of aggression: We come to value aggressive tactics for their own sake—for the sake of argument. Compromise becomes a dirty word, and we often feel guilty if we are conciliatory rather than confrontational—even if we achieve the result we're seeking.

Here's one example. A woman called another talk show on which I was a guest. She told the following story: "I was in a place

Jen
3

where a man was smoking, and there was a no-smoking sign. Instead of saying 'You aren't allowed to smoke in here. Put that out!' I said, 'I'm awfully sorry, but I have asthma, so your smoking makes it hard for me to breathe. Would you mind terribly not smoking?' When I said this, the man was extremely polite and solicitous, and he put his cigarette out, and I said, 'Oh, thank you, thank you!' as if he'd done a wonderful thing for me. Why did I do that?"

9 I think this woman expected me—the communications expert—to say she needs assertiveness training to confront smokers in a more aggressive manner. Instead, I told her that her approach was just fine. If she had tried to alter his behavior by reminding him of the rules, he might well have rebelled: "Who made you the enforcer? Mind your own business!" She had given the smoker a face-saving way of doing what she wanted, one that allowed him to feel chivalrous rather than chastised. This was kinder to him, but it was also kinder to herself, since it was more likely to lead to the result she desired.

10 Another caller disagreed with me, saying the first caller's style was "self-abasing." I persisted: There was nothing necessarily destructive about the way the woman handled the smoker. The mistake the second caller was making—a mistake many of us make—was to confuse ritual self-effacement with the literal kind. All human relations require us to find ways to get what we want from others without seeming to dominate them.

11 The opinions expressed by the two callers encapsulate the ethic of aggression that has us by our throats, particularly in public arenas such as politics and law. Issues are routinely approached by having two sides stake out opposing positions and do battle. This sometimes drives people to take positions that are more adversarial than they feel—and can get in the way of reaching a possible resolution. I have experienced this firsthand.

12 For my book about the workplace, *Talking from 9 to 5*, I spent time in companies, shadowing people, interviewing them and having individuals tape conversations when I wasn't there. Most companies were happy to proceed on a verbal agreement setting forth certain ground rules: Individuals would control the taping, identifying names would be changed, I would show them what I wrote about their company and change or delete

anything they did not approve. I also signed confidentiality agreements promising not to reveal anything I learned about the company's business.

Some companies, however, referred the matter to their attorneys so a contract could be written. In no case where attorneys became involved—mine as well as theirs—could we reach an agreement on working together.

Negotiations with one company stand out. Having agreed on 14 the procedures and safeguards, we expected to have a contract signed in a matter of weeks. But six months later, after thousands of dollars in legal fees and untold hours of everyone's time, the negotiations reached a dead end. The company's lawyer was demanding veto power over my entire book; it meant the company could (if it chose) prevent me from publishing the book even if I used no more than a handful of examples from this one company. I could not agree to that. Meanwhile, my lawyer was demanding for me rights to use the videotapes of conversations any way I wanted. The company could not agree to that; it meant I could (if I chose) put videotapes of their company on national television, make them look bad, reveal company secrets and open them up to being sued by their own employees.

The people I was working with at the company had no desire 15 to pass judgment on any part of my book that did not involve them, and I had no intention of using the videotapes except for analysis. These extreme demands could have been easily dismissed by the principals—except they had come after months of wrangling with the language of drafts passed back and forth. Everybody's patience and good will had worn out. The adversarial nature of the legal process had polarized us beyond repair.

Requiring people to behave like enemies can stir up mutual 16 enmity that remains long after a case has been settled or tried, and the lawyers have moved on. Because our legal system is based on the model of ritual battle, the object—like the object of all fights—is to win, and that can interfere with the goal of resolving disputes.

The same spirit drives the public discourse of politics and the 17 press, which are increasingly being given over to ritual attacks. On Jan. 18, 1994, retired admiral Bobby Ray Inman withdrew as nominee for secretary of defense after several news stories raised questions about his business dealings and his finances. Inman,

who had held high public office in both Democratic and Republican administrations, explained that he did not wish to serve again because of changes in the political climate—changes that resulted in public figures being subjected to relentless attack. Inman said he was told by one editor, “Bobby, you’ve just got to get thicker skin. We have to write a bad story about you every day. That’s our job.”

18 Everyone seemed to agree that Inman would have been confirmed. The news accounts about his withdrawal used words such as “bizarre,” “mystified” and “extraordinary.” A New York Times editorial reflected the news media’s befuddlement: “In fact, with the exception of a few columns, . . . a few editorials and one or two news stories, the selection of Mr. Inman had been unusually well received in Washington.” This evaluation dramatizes just how run-of-the-mill systematic attacks have become. With a wave of a subordinate clause (“a few editorials . . .”), attacking someone personally and (from his point of view) distorting his record are dismissed as so insignificant as to be unworthy of notice.

19 The idea that all public figures should expect to be criticized ruthlessly testifies to the ritualized nature of such attack: It is not sparked by specific wrongdoing but is triggered automatically.

20 I once asked a reporter about the common journalistic practice of challenging interviewees by repeating criticism to them. She told me it was the hardest part of her job. “It makes me uncomfortable,” she said. “I tell myself I’m someone else and force myself to do it.” But, she said she had no trouble being combative if she felt someone was guilty of behavior she considered wrong. And that is the crucial difference between ritual fighting and literal fighting: opposition of the heart.

21 It is easy to find examples throughout history of journalistic attacks that make today’s rhetoric seem tame. But in the past, such vituperation was motivated by true political passion, in contrast with today’s automatic, ritualized attacks—which seem to grow out of a belief that conflict is high-minded and good, a required and superior form of discourse.

22 The roots of our love for ritualized opposition lie in the educational system that we all pass through. Here’s a typical scene: The teacher sits at the head of the classroom, pleased with herself and her class. The students are engaged in a heated debate. The

very noise level reassures the teacher that the students are participating. Learning is going on. The class is a success.

But look again, cautions Patricia Rosof, a high school history 23 teacher who admits to having experienced just such a wave of satisfaction. On closer inspection, you notice that only a few students are participating in the debate; the majority of the class is sitting silently. And the students who are arguing are not addressing subtleties, nuances or complexities of the points they are making or disputing. They don’t have that luxury because they want to win the argument—so they must go for the most dramatic statements they can muster. They will not concede an opponent’s point—even if they see its validity—because that would weaken their position.

This aggressive intellectual style is cultivated and rewarded 24 in our colleges and universities. The standard way to write an academic paper is to position your work in opposition to someone else’s. This creates a need to prove others wrong, which is quite different from reading something with an open mind and discovering that you disagree with it. Graduate students learn that they must disprove others’ arguments in order to be original, make a contribution and demonstrate intellectual ability. The temptation is great to oversimplify at best, and at worst to distort or even misrepresent other positions, the better to refute them.

I caught a glimpse of this when I put the question to someone 25 who I felt had misrepresented my own work: “Why do you need to make others wrong for you to be right?” Her response: “It’s an argument!” Aha, I thought, that explains it. If you’re having an argument, you use every tactic you can think of—including distorting what your opponent just said—in order to win.

Staging everything in terms of polarized opposition limits the 26 information we get rather than broadening it. For one thing, when a certain kind of interaction is the norm, those who feel comfortable with that type of interaction are drawn to participate, and those who do not feel comfortable with it recoil and go elsewhere. If public discourse included a broad range of types, we would be making room for individuals with different temperaments. But when opposition and fights overwhelmingly predominate, only those who enjoy verbal sparring are likely to take part. Those who cannot comfortably take part in oppositional discourse—or choose not to—are likely to opt out.

27 But perhaps the most dangerous harvest of the ethic of aggression and ritual fighting is—as with the audience response to the screaming man on the television talk show—an atmosphere of animosity that spreads like a fever. In extreme forms, it rears its head in road rage and workplace shooting sprees. In more common forms, it leads to what is being decried everywhere as a lack of civility. It erodes our sense of human connection to those in public life—and to the strangers who cross our paths and people our private lives.

Fan Profanity

Howard M. Wasserman

1 Many free-speech controversies, especially on college campuses, are grounded in concerns for civility, politeness, and good taste. They also tend to follow the same path and end the same way. A government entity regulates speech in an effort to elevate discourse, limit the profane and protect public and personal sensitivities; courts strike down the regulations as violating the First Amendment freedom of speech; and we end up right where we started.

2 Colleges may be pursuing a similar course in trying to deal with objectionable cheering by students at sporting events. University of Maryland officials expressed anger and embarrassment following a men's basketball game against conference rival Duke University in January 2004, when fans chanted and sported T-shirts with the slogan "F--- Duke" and directed epithets at Duke players. This was one of many incidents of offensive or obnoxious cheering by students throughout the country during the 2004 college basketball season.

3 John K. Anderson, chief of the Educational Affairs Division of the Maryland Attorney General's Office, advised the university that a written code of fan conduct applicable at a university-owned and -operated athletic facility, if "carefully drafted," would be constitutionally permissible. University of Maryland Associate Athletics Director Michael Lipitz began working with a committee of

students to consider rules of conduct. The committee ultimately recommended that the university promote voluntary compliance, although rules and formal punishment remain a "last resort" if a proposed standing monitoring committee determines that voluntary compliance is ineffective. Other schools, such as Western Michigan University, currently have, or are studying the need for, similar codes to restrict profanity and other abusive language. And the approach of a new academic year may bring new incidents and new university attempts at regulating fan expression.

One can envision guidelines restricting profanity and epithets 4 in signs and chants, as well as imposing a general requirement that students keep things stylish, clever, clean, and classy. Presumably, the sanction would be removal from the arena. The ostensible purpose behind such guidelines is to enable the majority of fans to enjoy the game unburdened by objectionable or offensive signs, messages, and chants. But any such policy enacted and enforced at a public university such as Maryland should not and perhaps will not survive First Amendment scrutiny. On the other hand, a private college, not bound by the strictures of the First Amendment, obviously remains free to impose such restrictions.

The speech at issue is expression by fans related to a sporting 5 event, to all aspects of the game and all the participants in the game—what we can call "cheering speech." Cheering speech can be directed at players, coaches, officials, executives, administrators, or other fans. It can be in support of one's own players and team, against the opposing players and team or even critical of one's own players and team. It can be about events on the field or it can target broader social and political issues surrounding the game, the players on sport in general.

In advising the university that it could regulate cheering 6 speech, Anderson insisted that fans at sporting events, particularly children, are "captive auditors." They are captives in the arena or stadium; the only way to avoid being offended by the chants or signs is to leave the arena or stop coming to games. This captive status, Anderson argued, alters the ordinary First Amendment burden. Rather than requiring objecting listeners to "avert their eyes" (or ears) to avoid objectionable speech, the university can force speakers, especially students, to alter their manner of communicating to protect the sensibilities of these captive fans.
