Explains the Pathophysiology of Rib Fractures and Fractured Femur	In your report, you have: Provided an in-depth and accurate discussion of the all of the relevant disruptions to normal physiology that occur in fractures of the ribs and femur, with very clear links made to all of the abnormal assessment findings in the case study.	In your report, you have: Provided an accurate and detailed discussion of all of the relevant disruptions to normal physiology that occur in fractures of the rib and femur. There are very clear links made to most of the abnormal assessment findings in the case study.	In your report, you have: Provided a mostly accurate and more detailed explanation of the most significant disruptions to normal physiology that occur in fractures of the ribs and femur.	In your report, you have: Provided a broad and/or general overview the main disruptions to normal physiological processes that occur in fractures of the ribs and femur. The discussion may include some minor inaccuracies and there are some links made to the abnormal assessment findings from the case study	In your report, you have: Provided a superficial and/or inaccurate discussion of the disruptions normal physiological processes that occur in fractures of the ribs and femur, And/or There are minimal or no links to the abnormal assessment findings from the case study.	30

Prioritisation of Nursing Interventions	In your report, you have: Correctly prioritised care in order of clinical urgency and consistently justified your reasons for	In your report, you have: Correctly prioritised care in order of clinical urgency and mostly provided clear	In your report, you have: Mostly prioritised care in order of clinical urgency, but further explanation of your reasons for	In your report, you have: Demonstrated the need for improvement in the prioritisation of the nursing interventions	In your report, you have: Demonstrated unsafe prioritisation of the nursing interventions included in the case study.	

Criteria	HD	DI	CR	PS	FL	Max Grade (Only one number per cell.)
	prioritising care in this order.	explanations of your reasons for prioritising care in this order.	prioritising care in this order is needed.	provided in the case study to better meet the patient's immediate needs. However, patient safety would not be compromised in the clinical setting.	0-4.5	10
Linking Nursing Interventions to the Underlying Pathophysiology	8.5-10 In your report, you have: Included comprehensive and accurate rationales that consistently make substantial links between the nursing interventions and the underlying pathophysiology of the patient's injuries.	7.5-8 In your report, you have: Included detailed rationales that clearly and accurately explain how each of the nursing interventions relate to the underlying pathophysiology of the patient's injuries.	6.5-7 In your report, you have: Included rationales that mostly explain how the nursing interventions relate to the underlying pathophysiology of the patient's injuries, but more detail is needed to establish clearer links.	5-6 In your report, you have: Included mostly basic and/or brief rationales that make some tenuous links between the nursing interventions and the underlying pathophysiology of the patient's injuries.	Made few links between the nursing interventions and the underlying pathophysiology of the patient's injuries.	20
Use of Evidence to Support the Discussion	17-20 An extensive range of current and highly appropriate sources have been located, evaluated and integrated to substantially support the discussion. The majority of sources are research journal articles.	15-16.5 A range of current and appropriate sources have been located, evaluated and integrated into the discussion. The majority of sources are research journal articles.	13-14.5 A range of current and appropriate sources have been used, including research journal articles. The sources have been evaluated and used to mostly support the discussion, but further development is needed to better integrate sources into the discussion.	10-12.5 Information from the minimum number of current and appropriate sources has been used And/or The sources used only provide some support for the discussion. Few research journal articles have been used.	0-9.5 Less than the required number of current and appropriate sources have been used to support the discussion.	20
