

how does it affect our day to day lives? What changes are occurring right now as I write? I learned that the universe is a much more intricate phenomenon than explained by Stephen Hawking. I would agree that this book has done a marvelous job at explaining something most of us can do even holding the highest of educational degrees and experience. But then again that does not mean that a normal human being cannot think rationally in his limited space.

After reading this book I have more questions that need answering for my self peace. Questions about the existence of God, questions as to whether each human action made has any effect on the universe. Is there a parallel universe? Or the fictions idea of another dimension where another world exists with the same population but having different appearances or different lives? Is there a concept of the multi-universe?

It doesn't not change my old world views to such an extent but it sure makes me question the existing world. It makes me question whether the purpose of our existence is just to live our lives to the fullest we can or to serve God in this world for a better hereafter. I am not implying that I am a very God driven person but I can say confidently that after reading this book I have many questions that may have not arose under normal circumstances. After reading this book I can say that now I look at the world with many questions in mind. I question almost every little step, every little decision I make thinking how will this affect me in the long run? How other people will be affected by it? At the end I'm questioning my own existence and the daily impact I make upon this world by my actions. Previously I used to believe I very simple idea, that there is one God who has the almighty power and we are its slaves here on earth to serve a purpose. Now after reading this book I believe that there's more it, that the human mind once tapped can achieve more greatness one can ever imagine by just asking the right questions.

need "how physics
change your mind"
